

Malte Perrong

Malte Perrong Unit embodies the essential qualities of security, flexibility, and quality. Its discreet design seamlessly integrates into various settings, making it an ideal choice.

It's a modern, fully-equipped alternative to traditional fuel stations, offering flexibility and features for contemporary needs. Complete with pumps and space for a card terminal, it's crafted from weather-resistant materials like aluminium and galvanized sheet metal. Each unit is custom-made to withstand the elements and features an isolated technology room for the electrical central, all built upon a robust steel frame with crane loops for easy positioning.

One major advantage is its swift and easy installation, with above-ground equipment allowing for quick relocation. Minimal groundwork results in low installation costs, offering mobility for various applications. The Malte Perrong Unit can be tailored to your specific needs and surroundings.

Construction

Roof modules are sectioned for easy handling and shipping, while cable glands for end-piece cables are screw-fitted for straightforward electrical installation. The walls are robotically bent for precision, and the technical room features insulation with plywood on the walls and ceiling, with a floor consisting of floor plywood.

Flexible

Easy to place

Plug & Play – complete unit
